Swamy Sir(Trainer/Mentor)

Course: Front-End Technologies

Date: February2026

## ABSTRACT

The **Global Quest Technologies Landing Page** project is a mini web development initiative aimed at designing a professional and responsive landing page using HTML and CSS. The project incorporates essential sections such as a navigation bar, hero banner, service highlights, and a footer to simulate a real-world corporate website. The design emphasizes simplicity, clarity, and modern aesthetics, ensuring accessibility across devices through responsive styling. This project not only demonstrates proficiency in front-end technologies but also reflects the importance of user-centric design in digital branding. It serves as a practical example of how core web development skills can be applied to create impactful digital experiences for businesses in the technology domain.

---

## INTRODUCTION

The **Global Quest Technologies Landing Page** is a front-end web development project designed using HTML and CSS. The purpose of this project is to create a visually appealing and responsive landing page that represents a modern technology company. A landing page serves as the first point of interaction between a business and its audience, making it crucial for establishing credibility, showcasing services, and guiding users toward key actions. This project demonstrates the application of fundamental web technologies to build a structured, user-friendly interface that highlights the brand identity of Global Quest Technology. By focusing on layout design, typography, color schemes, and responsive elements, the project emphasizes how effective front-end development can enhance user engagement and communication.

      <h1>WelcometoFront-endTechnologies</h1>
      <p>Front-end technologies are tools and frameworks used to build the
visualandinteractivepartsofawebsite thatusersseeandinteractwithdirectly. The core
front-end technologies include HTML for structuring content, CSS for styling and
layout, and JavaScript for adding interactivity and dynamic behavior.
ModerndevelopmentalsousesframeworksandlibrarieslikeReact,Angular,and Bootstrap to
create responsive, fast, and user-friendly web applications.</p>
    </div>
  </div>

  <!--Sectionandarticles-->
  <section>
    <article>
      <h1>HTML</h1>
      <p>HTML (HyperText Markup Language) is the standard language used to
create and structure web pages. It provides the basic framework of a website by
using elements called tags to define headings, paragraphs, images, links, tables,
forms, and more. HTML does not control how a page looks – instead, it organizes the
contentsothatwebbrowserscandisplayitproperly.Everywebsiteyouvisitonthe internet is
built using HTML as its foundation.</p>
      <p>HTMLiseasytolearn,beginner-friendly,andessentialforanyone starting
web development. With continuous updates like HTML5, it now supports multimedia
elements such as audio, video, and graphics without needing extra plugins, making
it more powerful and efficient than ever before.</p>
    </article>
  </section>

```

```
</article>
```

```
<article>
```

```
  <h1>CSS</h1>
```

```
  <p>CSS (Cascading Style Sheets) is a styling language used to control the appearance and layout of web pages. While HTML structures the content, CSS is responsible for making websites visually attractive. It allows developers to change colors, fonts, spacing, alignment, backgrounds, borders, and positioning of elements. By using CSS, designers can create responsive layouts that adapt to different screen sizes such as mobile phones, tablets, and desktops.</p>
```

```
  <p>CSS improves website design by separating content from presentation, making web pages easier to maintain and update. It supports features like animations, transitions, flexbox, and grid layout to build modern and dynamic user interfaces. It is an essential skill for front-end web development and works closely with HTML and JavaScript to create complete web applications.</p>
```

```
</article>
```

```
<article>
```

```
  <h1>Bootstrap</h1>
```

```
  <p>Bootstrap is a popular open-source front-end framework used to design responsive and mobile-first websites quickly and easily. It provides a collection of pre-designed CSS and JavaScript components such as buttons, navigation bars, forms, cards, modals, and grids. By using Bootstrap, developers can save time because they don't have to write all styles from scratch. Its built-in grid system helps create flexible layouts that automatically adjust to different screen sizes.</p>
```

```
  <p>Bootstrap also ensures consistency and clean design across web pages. It includes ready-to-use classes that make styling simple, even for beginners. With features like responsive utilities, icons, and customizable themes, Bootstrap helps developers build professional-looking websites efficiently.</p>
```

```
</article>
```

```
<article>
```

```
  <h1>JavaScript</h1>
```

```
  <p>JavaScript is a powerful programming language used to make websites interactive and dynamic. While HTML structures the content and CSS styles it, JavaScript adds functionality such as form validation, animations, sliders, pop-ups, and real-time updates. It runs directly in the web browser, allowing users to interact with web pages without needing to reload them. This makes websites faster and more engaging.</p>
```

```
  <p>JavaScript is widely used in modern web development and supports advanced features like event handling, DOM manipulation, and API integration. With the help of frameworks and libraries such as React, Angular, and Vue, JavaScript enables developers to build complex and responsive web applications efficiently.</p>
```

```
</article>
```

```
<article>
```

```
  <h1>React JS</h1>
```

```
  <p>React JS is a popular open-source JavaScript library used for building user interfaces, especially for single-page applications. It was developed by Facebook (now Meta) to create fast and interactive web applications. React allows developers to build reusable components, which makes code more organized and easier to maintain. Instead of updating the entire webpage, React uses a virtual DOM to
```

```

efficiently update only the parts of the page that change, improving performance.</p>
    <p>ReactJS follows a component-based architecture, making it easy to manage
complex applications by breaking the UI into smaller, reusable pieces. It also
supports features like hooks, state management, and props to handle dynamic
data. With strong community support and integration with tools like Node.js, React is widely
used to develop modern, scalable, and responsive web applications.</p>
    </article>
</section>

</body>
</html>

```

## CSS CODE:

```

*{
    margin: 0px;
    padding: 0px;
    box-sizing: border-box;
    font-family: Arial, Helvetica, sans-serif;
}

body{
    margin-bottom: 2000px; /*←your value makes page very long*/
    background-color: lightblue;
}

header{
    height: 150px;
    background-image: url("C:\Users\Akshitha\Downloads\image.png"); /*←example
modern building - replace if you want */
    background-size: cover;
    background-position: center;
}

headerh1{
    font-size: 70px;
    padding: 20px;
    color: white;
    text-shadow: 0px 0px 15px blue;
}

.menu{
    height: 80px;
    width: 100%;
    background-color: darkslategray;
    display: flex;
    align-items: center;
    justify-content: space-around;
}

```

```

    box-shadow: 5px 5px 15px teal;
    position: sticky;
    top: 0px;
    z-index: 100;    /*added so it stays on top properly*/
}

.menua{
    text-decoration: none;
    color: yellow;
    font-size: 20px;
    flex: auto;
    padding: 1px;
}

    margin: 10px;
    font-size: 25px;
}

section{
    /*you wrote many background/margin but incomplete - keeping simple*/
}

```

```

sectionarticle{
    color: blue;
}

sectionarticleh1{
    font-size:40px;
    color: white;
    padding: 10px;
    background-color:lightblue;
}

section article p {
    line-height:35px;
    text-indent:50px;
    padding: 10px;
    font-size: 20px;
}

```

## OUTPUT:

## CONTACT:

A mobile application interface for registration. The background is a scenic image of mountains at sunset. In the top left corner, there is a purple button with a white house icon and the text "Home". Centered on the screen is a registration form with a dark blue header containing the word "Registration" in white. The form has four white input fields with labels: "First Name", "Last Name", "Enter email", and "Specify your requirements". Below the input fields is a green button with a yellow glow effect and the text "REGISTER" in blue capital letters.
